DETAILED ACTION

This application contains claims directed to the following patentably distinct species of the claimed invention:

<u>SPECIES</u>	<u>FIGURES</u>
Α	1
В	5
С	7

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 12 and 21 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 3731

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Richard Besha on April 28, 2004 a provisional election was made without traverse to prosecute the invention of Specie 1, claims 1-16 and 19-23. Affirmation of this election must be made by applicant in replying to this Office action. Claims 17 and 18 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-15 and 19-23 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Publication 2002/0188296 to Michelson. In Figs. 11 and 27, Michelson discloses a spinal fixation device 500 comprising a first plate/male projection 502 and a second plate/female projection 504. The projections are interlockingly

Art Unit: 3731

connected with ratchet teeth. As illustrated in Fig. 11, the teeth may be advanced yet preclude the plates from moving away from one another. With respect to claim 6, the ratchet teeth form the plurality of projections and recesses. The plates must bias in order for the teeth to advance and lock when fastened together.

The plates have two halves. The ratchet teeth are carried along both halves, in other words, along the opposite sides of the plate.

The device further comprises a stop, comprising the shoulder of the upper ridge of plate 504, which is adjacent to the ratchet teeth. Fig. 28 illustrates the curvature of the plates. As also illustrated in Fig. 28, the guide comprises the outer receiving sides of plate 502, which create a channel. The other guide comprises the extruded margin of plate 504 located within the channel.

The plates have openings 526 to receive fasteners.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(c) which forms the basis for all obviousness rejections set forth in this Office action:

(c) Subject matter developed by another person, which qualifies as prior art only under one or more of subsections (e), (f), and (g) of section 102of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 5-7 and 16 are rejected under 35 U.S.C. 103(c) as being unpatentable over Michelson in view of U.S. Patent No. 5,842,822 to Everett et al. Michelson discloses a way of attaching two plates 502 and 504. In the alternative, Everett teaches

Art Unit: 3731

Page 5

an alternative way of attaching in Figs. 1 and 2. Everett teaches ratchet teeth extending along the sides of the male portion of a pair of flexible arms. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Michelson device as taught by Everett to facilitate a simpler and quicker way of connecting the plates.

Art Unit: 3731

Page 6

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: U.S. Patent No. 3,385,299 to Le Roy, U.S. Patent No. 5,672,177 to Seldin, and U.S. Patent No. 6,176,881 to Schar et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Jacob Davis whose telephone number is (703) 305-1232. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael J. Milano can be reached on (703) 308-2496. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
